

Cody Estes

Estes Citrus Inc

We have been working with Pessl Instruments/METOS for several years in our Florida Citrus operations and have recently added LoRa-based station and the new iMETOS Mobilab to our list of devices. Marcos Bengolea has been our representative for installation and training.

The FieldClimate platform has made monitoring our weather and soil moisture information a breeze. The equipment has been reliable and accurate. We schedule our automated irrigation equipment based on these readings. We currently have 14 stations.

The LoRA wide area network replaces the individual SIM cards on the weather stations saving monthly billing and still providing reliable readings from 3 miles away.

The iMETOS Mobilab is our newest addition and will be used for leaf sap & soil analysis. With this mobile lab we will be able to have almost instant readings for nutritional management with our fertigation program. Marcos is knowledgeable and patient with the training required to get the full benefit from the rich list of options available on this platform.

I highly recommend the equipment, software and Marcos!
